

**California Marine Life Protection Act Initiative
South Coast Study Region
Preliminary Staff Summary of Area and Habitats in
Draft External Proposal A
February 27, 2009**

Note: For this preliminary summary of basic area and habitat statistics, the results are based on best available, coarse-scale substrate data. Future analyses will use more detailed, fine-scale data. Also for this analysis, information on levels of protection is not available.

³ Note: The results from these preliminary analyses are based on coarse-scale substrate data. Future analyses will be conducted using more detailed, fine-scale data.

⁴ Note: Habitats measured as an area (mi²) except for those with a * notation. Habitats with a * notation are expressed in linear units (mi).

⁵ Note: The "NA" notation is due to the fact that either data is not available or these habitats are not found or are only found in small areas in this study region.
